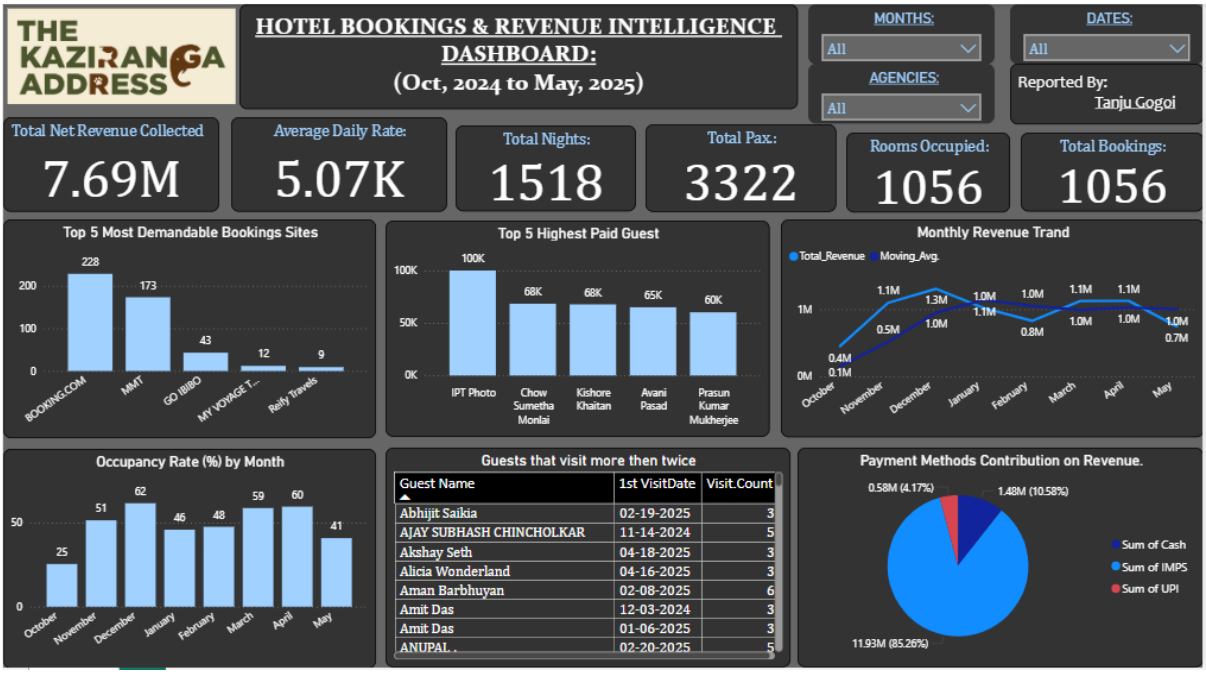
HOTEL BOOKINGS & REVENUE INTELLIGENCE DASHBOARD:

(Oct, 2024 to May, 2025)

Data Source: THE KAZIRANGA ADDRESS Hotel.

The dashboard is branded with "THE KAZIRANGA ADDRESS", reflecting its real world data in a hospitality business environment. It also includes a dynamic timestamp indicating the latest data refresh, ensuring transparency and reliability of insights.

Designed with a management-focused approach, the dashboard enables stakeholders to efficiently monitor overall performance, identify room booking trends, and analyse guest demographics at a glance. Its intuitive layout and data-driven visuals support quick decision-making and strategic planning.



A Brief description of Data Tables:

****Table Name: All_Bookings:: This table stores all room booking transactions and acts as the primary dataset for analysing occupancy, revenue and guest behaviour. Table contains Unique Reservation number, Guest name, Room Types, Checkin & Checkout Dates Total nights of stayed, Revenue collected, Avg Daily rates etc.**

****Table Name: DayWise_Revenue:: This Table stores daily revenue transactions categorized by payment method. Its Contains Transaction date, Payment methods(cash, card, UPI & IMPS) and Trasaction amount.**

**Table Name: INV_Wise_Details:: This table contains invoice-level details for each guest stay, including lodging charges, taxes and payment amount.

**Table Name: DateTable & Stay_DateTable:: Two manually created calendar tables used for time intelligence functions.

Date Table DAX:

```
DateTable = ADDCOLUMNS(CALENDAR(DATE(2024,9,1), DATE(2025,5,31)),

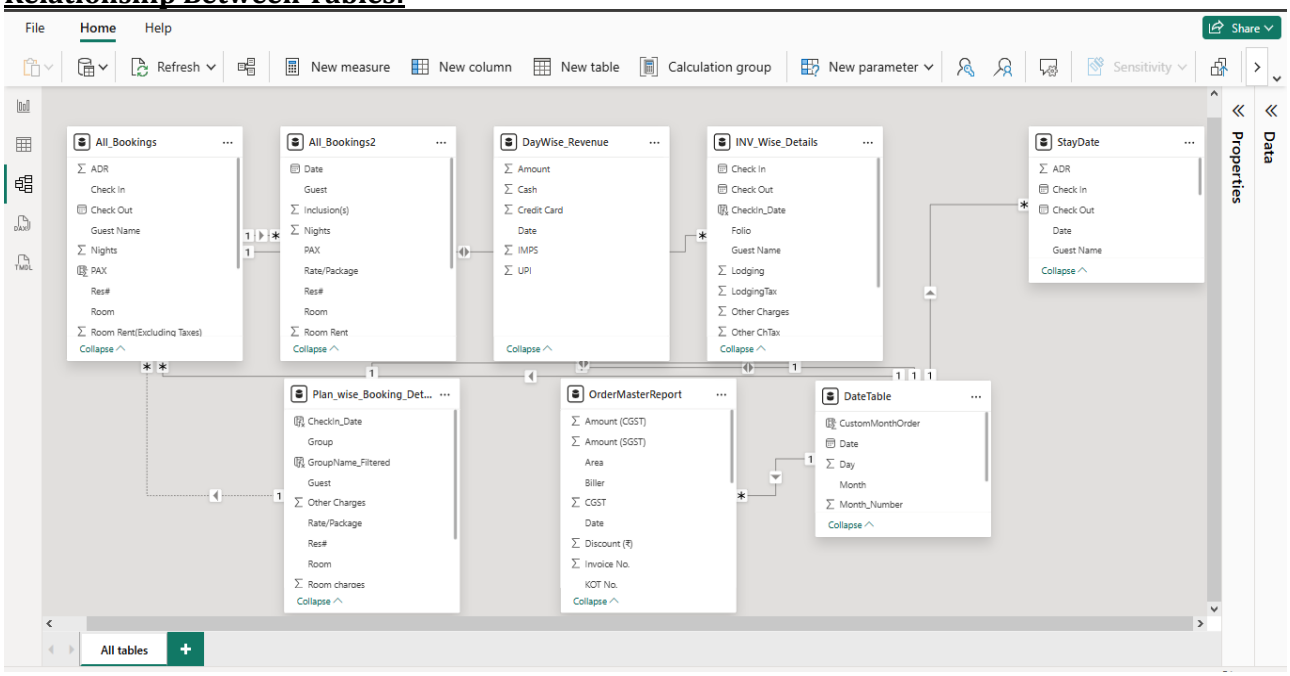
"Year", YEAR([Date]),
"Month", FORMAT([Date], "MMMM"),
"Month_Number", MONTH([Date]),
"Weekday", FORMAT([Date], "dddd"),
"Day",DAY([Date]))
```

StayDate Table DAX:

```
StayDate = ADDCOLUMNS(GENERATE(All_Bookings,

VAR CheckIn=All_Bookings[Check In]
VAR Nights=INT(All_Bookings[Nights])
RETURN CALENDAR(CheckIn, CheckIn+Nights-1)), "StayDate",[Date])
```

Relationship Between Tables:



DAX Measures that usage in this Dashboard Visuals:

```
**Moving_Avg. =
CALCULATE([Total_Revenue],DATESINPERIOD(DateTable[Date],MAX(DateTable[Date]),-3, MONTH))/3

**Total Bookings = DISTINCTCOUNT(All_Bookings[Res#])
```

```
**Total_Revenue = SUM(All_Bookings[Room Rent(Excluding Taxes)])
```

```
**Visit.Count = CALCULATE(COUNTROWS(All_Bookings),ALLEXCEPT(All_Bookings,
All_Bookings[Guest Name]))
```

```
**ADR = DIVIDE(SUM(All_Bookings2[Room Rent]),SUM(All_Bookings[Nights]))
```

```
**Occupancy Rate (%) =

VAR RoomsOccupied = [RoomsOccupied]
VAR DaysInMonth = DISTINCTCOUNT(DateTable[Date])
VAR TotalAvailable = DaysInMonth * 9
RETURN
DIVIDE(RoomsOccupied, TotalAvailable, 0) * 100
```

```
**RoomsOccupied = CALCULATE(DISTINCTCOUNT(StayDate[Res#]),StayDate)
```

```
**StayDate = ADDCOLUMNS(GENERATE(All_Bookings,

VAR CheckIn=All_Bookings[Check In]
VAR Nights=INT(All_Bookings[Nights])
RETURN CALENDAR(CheckIn, CheckIn+Nights-1)), "StayDate",[Date])
```

<u>Conclusion:</u> This dashboard for "THE KAZIRANGA ADDRESS" effectively transforms raw booking and revenue data into a actionable business insights.
